

NewAge Industries launches new nylon hose clamps Kwik Clamp

Friday, 03 July 2009

NewAge® Industries, a manufacturer of thermoplastic and thermoset tubing and hose, recently announced its Kwik Clamp™, a line of nylon hose clamps, which now withstands temperatures ranging from -40°F to 302°F (-40°C to 150°C) and is suitable to handle moderate non-hydraulic pressure applications in a wide variety of industries.

NewAge® Industries, a manufacturer of thermoplastic and thermoset tubing and hose, recently announced its Kwik Clamp™, a line of nylon hose clamps, which now withstands temperatures ranging from -40°F to 302°F (-40°C to 150°C) and is suitable to handle moderate non-hydraulic pressure applications in a wide variety of industries.

According to the company's press release, Kwik Clamps are light weight, non-conductive, and may be reused. In addition, the new line offers a patented double row of durable teeth to ensure a strong bond that will not vibrate loose. Made from U.L.-listed, black, nylon 6-6, the new line of nylon hose clamps cannot corrode or rust like some of their metal counterparts. As their name implies, installation and removal is quick and no tools are needed.
